

“HACKATHONS ARE NO LONGER FOR CODERS ONLY”

HackerEarth offers enterprise software solutions that help organisations with their innovation management and technical recruitment needs. The company has conducted over 1000 hackathons and addressed 10,000 programming challenges till date. In an interaction with the **OSFY editorial team, Vivek Prakash, CTO and co-founder, HackerEarth**, discusses the role of open source in HackerEarth, the open source tools used, the challenges in finding the right talent and much more.

Q What was the idea behind setting up HackerEarth? How has the journey been so far?

The nature of every business is changing—it is increasingly becoming technology-driven. This changing nature of work requires businesses to reinvent the way they hire, retain and leverage talent, in order to constantly innovate. Today, the biggest threat for a business is to be out-innovated. At HackerEarth, we help businesses to constantly drive innovation by leveraging the power of their internal talent, by crowd-sourcing solutions and hiring the right people.

The journey so far has been phenomenal. Today, HackerEarth has about 2.5 million developers and works with 500+ customers all over the world. We are growing at a fast pace. We plan to add another one million developers within the next one year and take the customer base to over 1000.

Q How are you helping the developers improve their technical knowledge using your platform?

Developers get access to real-world problems on HackerEarth that require broad skillsets, ranging from knowledge of programming and machine learning (ML), to experience in domains like healthcare, fintech, and new concepts such as blockchain. By working on problems, developers are not only able to
