

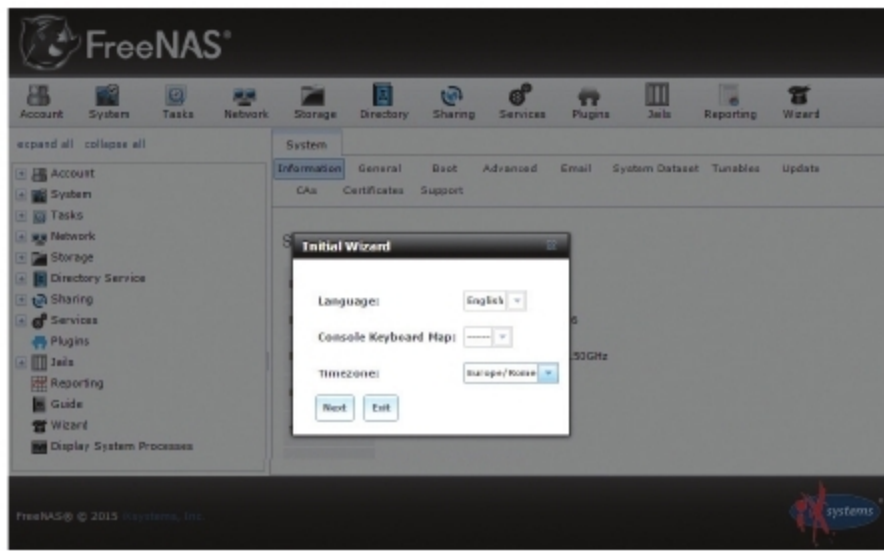

Figure 11: Initial wizard setup

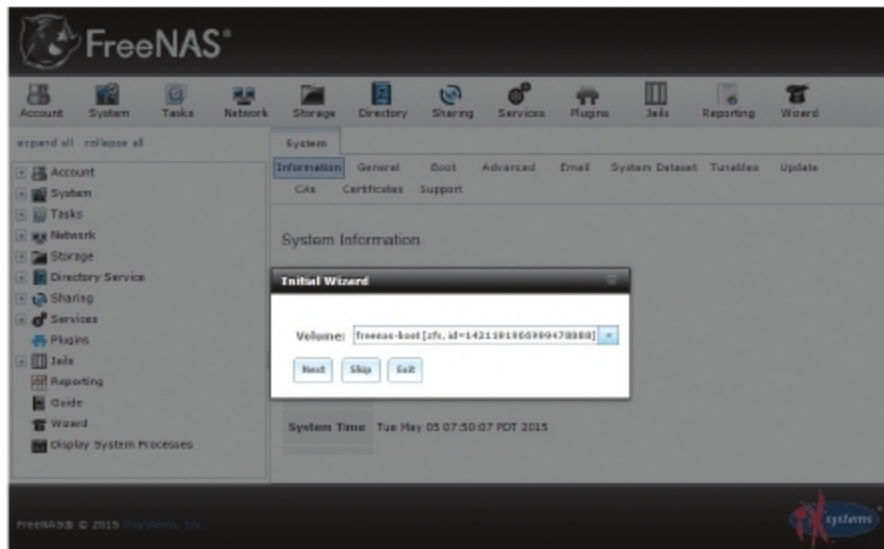

Figure 12: Wizard volume setup

We will look at how to create a CIFS (SMB) share in future posts; but for now, leave the fields empty.

You can now configure FreeNAS to send alarms and notices to an email account and affirm it.

We now have to allocate the space for storing the information. Go to the *Storage* section and click on *Volume Manager*. We have four disks accessible, and a RaidZ setup is the best trade-off between security, storage capacity and performance.

The storage volume is now ready for use.

The road ahead

As the volume of data used increases, advanced storage solutions that are easy to maintain are required. When these storage solutions are implemented and maintained properly, they provide the required safety to the data. NAS and SAN offer centralised storage, are very easy to maintain and do not require huge investments for setting up. Open source NAS and SAN solutions allow small business users to securely store their data and grow in the IT world. **END**
