

- Capturing real-time data in multiple formats such as:
 - Images
 - Multimedia including video
 - Rich text format
 - PDFs
 - Spreadsheets
 - Presentations and slide shows
 - Word processing documents
 - XML
 - Creation of data
 - Transformation of data
 - Indexing and aggregation with grouping
 - Secured storage and repository management
 - Encrypted storage
 - Retrieving and fetching data in a secured way
 - Creation of information assets in multiple formats
 - Analysis of the properties of data
 - Report-generation in multiple formats
 - Form processing for accepting dynamic input
 - Enterprise workflow management
- A list of free tools for enterprise content and document management is given in Table 1.

Other ECM tools are FileRun, Kimios, LogicalDOC, Maarch Courier DMS, etc.

The features of enterprise content and document management tools are:

- Minimise redundancy or duplication
- Free records management
- Support for communication using in-built mail and document transmission
- Improved and effective data management with a deep knowledge base
- Optimisation of storage spaces with detailed information repository management
- Support for bar code and quick response (QR) code
- Support for re-usage of data over the long term
- Improvement of the documentation and regulatory processes for ISO standards and related certification
- Enhanced classification and indexing

- of data files and documents for access to multiple departments and units of the organisation
- Access to data using multiple devices including mobile phones, tablets, etc
- Automated business workflow and processes
- Reduced delays and downtime
- Dynamic compression of large files
- Capturing of metadata so that deep evaluation and searching of documents can be done with higher degrees of accuracy
- Management of subscriptions and alerts associated with specific features of the documents
- Version control with the update of revisions in the repository
- In-built support for the multiple viewers of documents so that any type of file or document can be viewed and visualised on the software itself
- Extraction of historical records and tracing the documents with different options in advanced search
- Automation of tasks and scheduling for deadline based jobs
- Integration of electronic signatures for authentication and secured access
- Roles, permissions and privileges management
- Dynamic integration of scanned

files and extraction of text using optical character recognition (OCR)

- In-built malware control mechanisms including packets tracer and antivirus software

Popular enterprise content and document management tools

OpenKM: This tool is powerful, multi-functional and can be used for enterprise content and document management across multiple applications used in different units and departments of an organisation. The tool can import the files and documents from any digital source or streaming channel, so that real-time data can be collected. It is ideal in corporate, academic or personal environments to keep records in a secured repository for further use.

OpenKM is typically used for knowledge management and transfer, so that the deep knowledge about any unit or department in the organisation can be accessed at any time. The tool offers options for records management, organisation workflows, automation of tasks, corporate communication modules, secured file management, and many others. In addition, OpenKM has the capability to build customised applications as per the requirements of an organisation.
