

	Tron blockchain	VET blockchain	NEO blockchain	Ethereum blockchain
Consensus mechanism	Delegated Proof-of-Stake	Proof of authority	Delegated Byzantine Fault Tolerant (dbFT)	Proof-of-Work
Transactions per second (TPS)	2000	10,000	10,000	20
Quantum computer-proof	No	No	Yes	No
Controversies	Plagiarism	Not known	Network crash	DAO attack
Written in	JavaScript	C++,Solidity	C#	Go, C++, Solidity, Rust

The table above highlights the differences between the Tron, VET, NEO and Ethereum blockchains.

In the current environment, updates on newly created blockchain technologies are received regularly and each option promises something superior to the others. It is indeed quite challenging to select any particular blockchain for development purposes. **END**
