Notifying upstream projects of job completion

Finished: SUCCESS

On the Jenkins dashboard, test results are available after the successful execution of the build.

Artefacts can be archived in the post-build step of the Jenkins job. After the successful execution of the build, the package is archived.

Continuous integration makes continuous delivery (CD) a natural next step.

## Continuous delivery (CD)

This is all about deploying a package, an application version or a product increment to a specific environment in an automated way. Automation can be in the form of executing a script for package deployment, plugins to deploy an application on to a different Web server or application server, as well as the deployment or integration with different cloud platforms such as AWS, Microsoft Azure, etc. Deployment to specific environments can be done based on approvals, to maintain proper governance. **END** 🐧
