Jenkins dashboard. Click on *New Pipeline*.

We are going to use the Git repository, so select *Git* and provide the SSH URL. Now, copy the SSH key provided in the Jenkins dashboard. Next, configure the SSH key in the Git repository settings, and click on *Create Pipeline*.

Now, configure the agent as the master. Stage is required in the pipeline, so click on the + sign.

Go to *Manage Jenkins -> Global Tool Configurations -> Note the name of the Java Configuration*.

Go to *Manage Jenkins -> Global Tool Configurations -> Note the name of the Maven Configuration*

For a sample Java project:

Add Step -> Use a tool from a predefined tool installation -> Apache-Maven-3.5.3

Add Step -> Use a tool from a predefined tool installation -> jdk1.8.0_192

Add Step -> Windows Batch Script -> *mvn clean package*

Add Step -> Archive JUnit-formatted test results -> ***/*

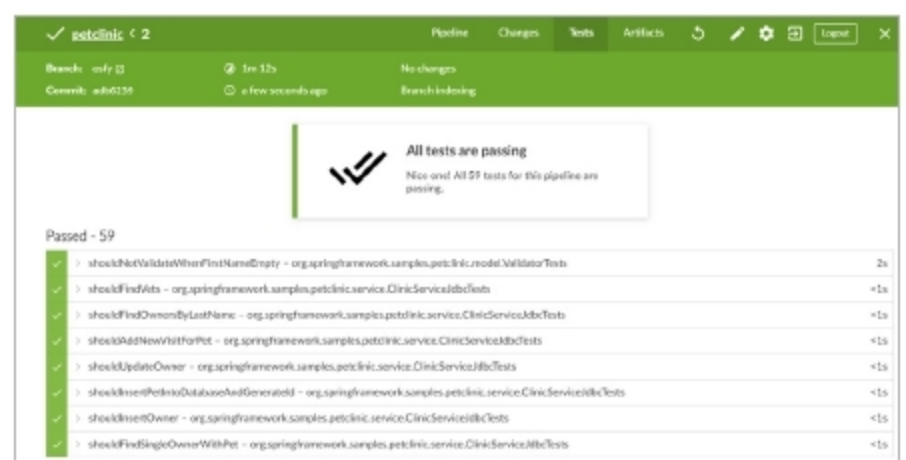

Figure 9: Blue Ocean test results

target/surefire-reports/TEST-.xml*

Add Step -> Archive the artifacts -> ***/*.war*
(As given in Figure 6.)

Now, click on the *Save* button. Provide a description,
