

DVD OF THE MONTH

This month's DVD has a collection of open source software for Windows, as well as a Linux OS that will help you teach and learn coding.

Zorin OS 12.4 Education

Built on an Ubuntu Linux foundation, Zorin OS comes with most of the popular open source software pre-installed. Zorin OS Education comes preloaded with powerful tools that help you teach coding. Whether you want to develop students' creativity and problem-solving skills or help them build incredible apps and websites, Zorin OS Education has everything you need to prepare your students for the future. It gives you the flexibility to install it alongside your existing operating system. You can choose which OS to use at start-up. Try out the bundled live DVD before you install it.

A collection of open source software

This month, we have a collection of different open source software that can be installed on Windows systems. The collection includes a browser, email clients, integrated development environments (IDEs) and various tools for sysadmins.

What is a live DVD?

A live CD/DVD or live disk contains a bootable operating system, the core program of any computer, which is designed to run all your programs and manage all your hardware and software.

Live CDs/DVDs have the ability to run a complete, modern OS on a computer even without secondary storage, such as a hard disk drive. The CD/DVD directly runs the OS and other applications from the DVD drive itself. Thus, a live disk allows you to try the OS before you install it, without erasing or installing anything on your current system. Such disks are used to demonstrate features or try out a release. They are also used for testing hardware functionality, before actual installation. To run a live DVD, you need to boot your computer using the disk in the ROM drive. To know how to set a boot device in the BIOS, refer to the hardware documentation for your computer/laptop.
