AI enabled smartphone from Panasonic

Consumer electronics multinational, Panasonic, has unveiled its latest artificial intelligence (AI) enabled smartphone – the Eluga X1 Pro.

The phone sports a 7.85mm thick stainless steel body, a 15.69cm (6.18 inch) screen protected with Corning Gorilla Glass 3, and has a resolution of 1080 x 2246 pixels.

It features a 16 megapixel + 5 megapixel dual-rear camera setup, and a 16 megapixel front camera for perfect selfies. With AI, the camera helps a user to take bokeh shots and live photos, and create backlighting effects. Similarly, the front camera offers features like beautification, bokeh, group selfies, and more.

The smartphone offers the face unlock option using AI and its Infrared (IR) Face Unlock feature. It supposedly works with an IR sensor, an IR camera and AI to unlock the phone, regardless of the lighting or whether the person sports a newly grown beard or glasses.

The Eluga X1 Pro comes with ARBO Hub, which tracks the way the phone is used on a day-to-day basis. The ARBO Hub allows users to perform multiple tasks through it instead of opening multiple apps, e.g., booking a cab, checking the news, cricket updates, etc.

The device comes with the MediaTek Helio P60 octa-core chipset featuring multi-core AI processing units and runs on Android 8.1 (Oreo). It also offers wireless charging.

The smartphone has 6GB RAM with 128GB storage and a 3000mAh battery.

The feature-loaded AI enabled smartphone is available via online and retail stores.

Lapcare launches wireless keyboard and mouse combo

Price:
Starting from
₹ 1,999

Lapcare, the international brand that specialises in laptop peripherals and accessories, has released a wireless keyboard/mouse combo called Smartoo in India.

This attractive combination includes a universal and ergonomically designed 2.4GHz wireless keyboard and wireless optical mouse with a host of other new features.

The keyboard uses membrane technology that ensures silent key operations and a cushioning effect for users' fingers, providing comfort over long working hours. The wireless mouse offers an ergonomic work table that is free of cable clutter.

The combination offers various features including an operating distance

of 8 to 10 metres with an auto-sleep function, 1200dpi optical mouse with precision tracking, a plug-and-play nano receiver with USB dongle, etc.

The Lapcare keyboard-and-mouse combo is available in various colour options such as gold, titanium, black+silver and just black via online and retail stores.

An eight-port Gigabit Ethernet smart switch from Digisol

Digisol, a leading provider of networking products and a subsidiary of Smartlink Holdings Ltd, has released its new eight-port Gigabit Ethernet smart managed switch – the DG-GS4112.

The intelligent network-manageable switch is designed for environments that require high performance, high port density and easy installation.

It offers eight Gigabit Ethernet and four SFP Giga combo ports; and supports VLAN, port mirroring and port trunking. It is an L2 managed switch

with a 24Gbps switching capacity, and offers four Gigabit SFP ports for high speed uplinks to servers or backbones.

The device supports the IEEE 802.1w Rapid Spanning Tree Protocol, which provides a loop-free network and redundant links to the core network with rapid convergence – all of which ensure faster recovery from failed links, enhancing overall network stability and reliability.

The Digisol DG-GS4112 switch is available via online and retail stores.
