

Five Popular Open Source Photo Viewers for Windows

Windows 10 has done away with the photo viewer altogether. Many users miss it since a photo viewer is needed. Thankfully, there are many open source options available. Here is a selection of some of the best.

There are many free and open source photo viewers available in the market that can be used in place of the photo viewer that has been done away with in Windows 10. This article features a few free and open source photo viewers for those who want to try out something different.

ImageGlass

ImageGlass is simple, very lightweight and fast. It looks similar to Windows photo viewers. It displays photo collections just like the Windows' default option does.

Features

- Easy installation.
- Free and open source software.
- It supports more than 70 image formats including all the popular ones like *.jpg*, *.png*, *.gif*, *.svg*, etc.
- An image can be opened directly from the clipboard.
- Faster switching between images.
- Faster thumbnail view.
- Drag-and-drop is supported for image viewing.
- There are many zoom options like scale to width, scale to height, lock zoom ratio, zoom to fit and auto zoom.
- Sharing of images is possible.
- Images can be viewed in the slide show format.
- An image can be converted from one to another extension.

- Different shortcut keys.
- Minimal UI and multi-language support.
- It also provides different themes which we can install as an add-on over the ImageGlass software.

JPEGView

JPEGView is a very configurable photo viewer/editor for JPEG, BMP, WEBP, TGA, PNG, GIF, and TIFF images. JPEGView's GUI is very minimal and, in terms of looks, it's pretty average compared to other photo viewers. Apart from that, on-the-fly image processing is provided for sharpness, rotation, colour balance, contrast, and local under-/overexposure.

Features

- It is very fast and small in size. It uses SSE2 and up to four CPU cores.
- It has the basic image processing tools.
- It can play all images in movie mode.

Nomacs

Nomacs is one of the free photo viewers that supports many platforms like Windows, Mac and Linux systems. It is fast and handles almost all common image formats including RAW. One of its advanced features is synchronisation with multiple viewers. It can also compare different images and highlight their differences.
