

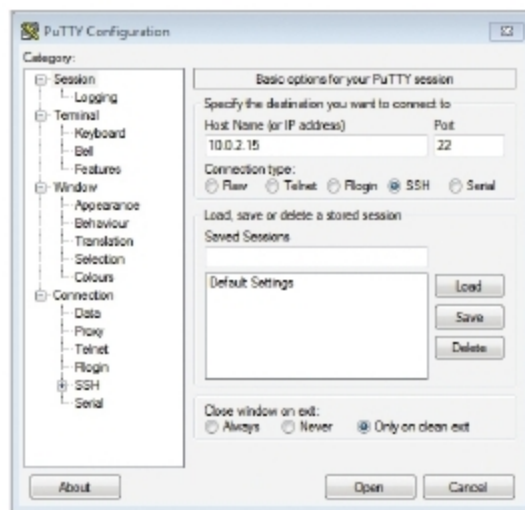

Figure 7: Using PuTTY to access virtual OS

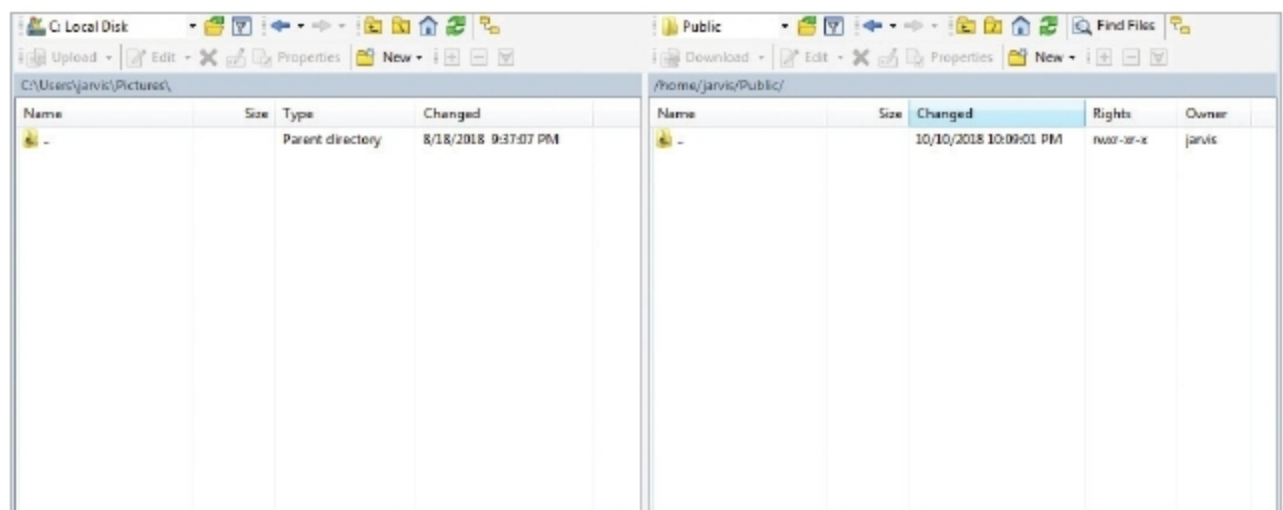

Figure 9: File sharing

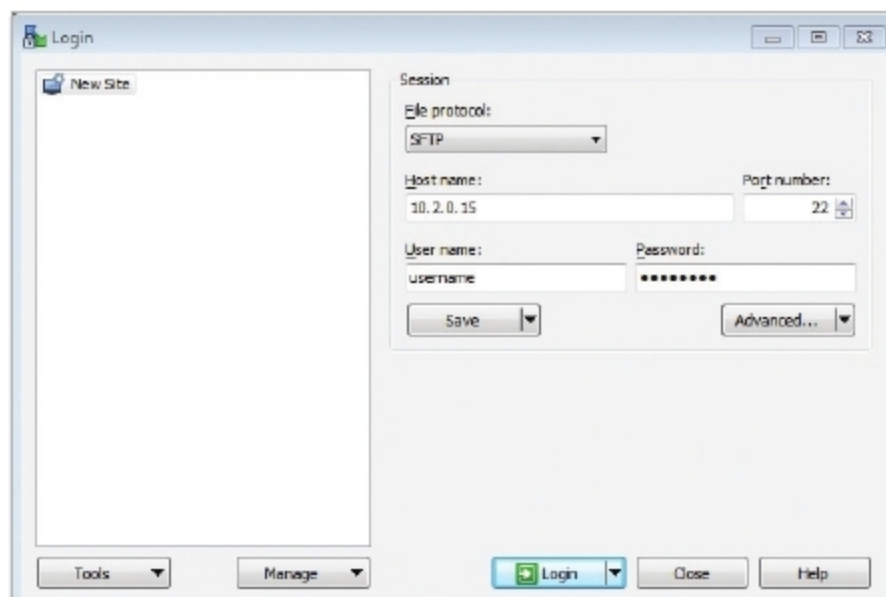

Figure 8: Connection settings

steps given below:

1. Open the PuTTY application.
2. Enter the Linux machine's IP address. In my case, the IP address was 10.2.0.15.
3. Click on the *Open* button.
4. Enter the user name and password, and you will be connected to the Linux machine.

Now onwards, you can execute Linux commands on this machine.

Sharing files between the host and guest

In this section, we'll discuss how to copy files from Windows to Linux and vice versa. VirtualBox provides various ways to share files between the host and guest like shared folders, shared clipboards, etc. We will explore one another way which will work with any remote Linux system.

We can share files between Windows to Linux using WinSCP, which is a free and open source SFTP, FTP, WebDAV, Amazon S3 and SCP client for Microsoft Windows. You can download it from <https://winscp.net/eng/download.php>.

To share files using WinSCP, perform the following steps:

1. Launch the WinSCP application.
2. Select the appropriate file protocol, and then enter the IP address, user name and password.
3. Click on the *Login* button.
4. This will open a window that is vertically split. The left side is a Windows workspace, while the right side is the Linux workspace.
5. To copy files from one machine to another, just drag and drop them from one workspace to the other. **END** 🐧
