paste it into the *C:/Windows* folder, as shown in Figure 2.

Now open the command prompt. Check the current folder as shown in Figure 3. In my PC, the default prompt path is *c:/user/Mohit*. In your PC, it may be different. So copy the *Sync1.ini* file and paste it in the *c:/user/<your-name>* folder.

Features

- Supports LAN, DMZ and wireless networks
- External connectivity via Static Ethernet, DHCP Ethernet, PPPoE, PPPoA using various USB and PCI DSL modems
- Port forwards, DMZ pin-holes
- Outbound filtering
- Timed access
- Simple to use Quality-of-Service (QoS)
- Traffic stats, including per interface and per IP totals for weeks and months
- IDS via automatically updated Snort rules
- UPnP support
- List of bad IP addresses to block

7. Untangle

Untangle NG Firewall takes the complexity out of network security—saving users' time. This firewall is intended to balance performance and protection, policy and productivity. It's an ideal fit for a range of organisations seeking a powerful, cost-effective network security solution that can handle any IT challenge — from small, remote offices to diverse school campuses and large, distributed organisations. The NG Firewall has different software modules that can be

Now plug in an external pen-drive. Check the pen-drive drive letter, which in my PC is E.

Based on your PC configuration, change the parameter of *Sync1.ini* placed in the *C:/user/<your-name>* directory.

Now open the command prompt and type the command as shown in Figure 4.

Now check your pen-drive. Look at *sync.log*, which was created in the folder *c:/user/<your-name>*

Four cases are possible:

1. When the whole folder is not present in the pen-drive (Figure 5).
2. When you modify the existing file (Figure 6).
3. When you create a new file (Figure 7).
4. The last case is a negative test case when the pen-drive is not present (Figure 8). **END**

enabled or disabled as per individual requirements. These software modules are also called apps. They are both free and paid apps. So, for full functionality, you have to buy subscriptions for what you want.

Features

- Virus blocker
- Firewall
- Web monitor
- Spam Blocker Lite
- Ad blocker
- OpenVPN
- Captive portal
- Intrusion prevention
- Phish blocker

According to me, these are the best firewalls available in the open source world. I have chosen them as they are cost-effective and user friendly. Others may have a different opinion. **END**
