```

Figure 3: Fetching the local IP address

```
<form id="setNick">
<input size="35" type="text" id="nickname" />
<p id="error"></p>
<input type="submit" value="Enter chatroom" />
</form>
</div>
<div id="contentWrap">
<div id="chatWrap">
<div id="chat"><ul id="cht"></ul></div>
<form id="send-message">
<input type="text" id="message" placeholder="your message"
/>
</form>
</div>
</div>
<div id="users">

</div>
</div>

<script src="https://code.jquery.com/jquery-3.1.0.min.js"></script>
<script type="text/javascript" src="/socket.io/socket.io.js"></script>
<script>
jQuery(function($){
var socket = io.connect();
var $nickForm = $('#setNick');
var $nickError = $('#error');
var $nickBox = $('#nickname');
var $users = $('#users');
var $messageForm = $('#send-message');
var $messageBox = $('#message');
var $chat = $('#cht');

$nickForm.submit(function(e){
e.preventDefault();
socket.emit('new user', $nickBox.val(), function(data){
if(data){
$('#nickWrap').hide();
$('#contentWrap').show();
} else{
$nickError.html('sorry, that username has been taken, try another one!');
}
});
});
});
```

Figure 4: Local chat

```
});
$nickBox.val('');
});

$messageForm.submit(function(e){
e.preventDefault();
socket.emit('send message', $messageBox.val());
$messageBox.val('');
});

socket.on('usernames', function(data){
var html = '<h2>online users:</h2><hr />';
for(i=0; i < data.length; i++){
html += data[i] + '<br />';
}
$users.html(html);
});

socket.on('new message', function(data){
$chat.append("<li><b>" + data.nick + " </b>" + data.msg +
"</li><br />");
});
});
</script>
</body>
</html>
```

Now, test this on other computers by accessing this application on using your IP. [🔗](#)
