

DVD OF THE MONTH

Software that is simple and secure.

Linux Mint 18.1 Cinnamon

This is a Linux distro for the desktop which comes with long term support (LTS) until 2021. It comes with updated software and many new features to make your desktop experience more comfortable and productive. It uses Cinnamon 3.2, which has had some visual changes that had been disabled in the past for stability reasons. The bundled DVD can boot in live mode and run Linux Mint on any 64-bit supported computer.

Fedora 25 Security Lab

The Fedora Security Lab provides a safe test environment to work on security auditing, forensics, system rescue and for teaching security testing methodologies in universities and other organisations. It comes with the clean and fast Xfce Desktop Environment and a customised menu that provides all the instruments needed to follow a proper test path for security testing or to rescue a broken system.

Peppermint 7 Respin (32-bit)

This is a lightning fast, lightweight Linux based operating system. The OS is secure, simple-to-use and customisable. Peppermint 7 is built on a long term support (LTS) code base so it can be used securely over a long period of time. Windows users are advised to use Rufus to create Peppermint 7 LiveUSBs. You can find the executable file in the `other_isos` folder on the DVD.

What is a live DVD??

A live CD/DVD or live disk contains a bootable operating system, the core program of any computer, which is designed to run all your programs and manage all your hardware and software.

Live CDs/DVDs have the ability to run a complete, modern OS on a computer even without secondary storage, such as a hard disk drive. The CD/DVD directly runs the OS and other applications from the DVD drive itself. Thus, a live disk allows you to try the OS before you install it, without erasing or installing anything on your current system. Such disks are used to demonstrate features or try out a release. They are also used for testing hardware functionality, before actual installation. To run a live DVD, you need to boot your computer using the disk in the ROM drive. To know how to set a boot device in BIOS, please refer to the hardware documentation for your computer/laptop.
