

Top 10 Open Source Tools for Web Developers

Every Web developer needs to be armed with a set of tools that aid and assist in building better and more complex websites. From the wide range of Web development tools available, we present a set of 10 that in the author's opinion are a must for any Web development tool kit.

At a time when websites are getting more complex, we need more sophisticated and advanced Web development tools. There are plenty of tools available and new ones are constantly being introduced. It's up to you to choose the best options to meet your requirements.

This article lists 10 open source Web development tools that I feel every Web developer should be aware of.

1. Node.js

Node is an open source, multi-platform, JavaScript runtime built around a Chrome V8 engine for developing a variety of Web applications. The Chrome V8 engine was designed to run JavaScript in the browser. Node has an event-driven, non-blocking I/O model, which makes it lightweight and efficient. Node.js was initially written by Ryan Dahl in 2009. The initial release supported only Linux.

2. Bootstrap

Bootstrap is an open source framework based on HTML, CSS and JavaScript. It is the most popular and widely used framework for developing responsive Web applications, and is designed to produce faster and simpler websites. Bootstrap was first designed by Mark Otto and Jacob Thornton in 2011.
