 Version: 1.8
 GitHub repository: <https://github.com/adobe/brackets>

5. Bower

Bower is an open source package manager for Web applications. We need to install a lot of packages while building a website, which Bower helps in automatically fetching and installing. The main objective of Bower is not to minimise code, but to install the right version of the packages and their dependencies required for a project.

Website: <https://bower.io/>
 Version: 1.8.0
 GitHub repository: <https://github.com/bower/bower>

6. Gulp.js

Gulp is an open source, powerful and extensible JavaScript automation library, which prefers code over configuration. It is a streaming build tool built on Node.js. Gulp.js is used to automate Web development workflows like bundling, CSS pre-processors, compilation, testing, optimisation, etc.
