

Table 1

	Component name	Purpose	Location
1	Label	To display a label	Palette-->User Interface-->Label
2	Button	To trigger events	Palette-->User Interface-->Button
3	Horizontal arrangement	To arrange the child components	Palette-->Layout-->Horizontal Arrangement
4	Notifier	To display on-screen information	Palette-->User Interface-->Notifier
5	List picker	To show list options	Palette--> User Interface --> List Picker
6	Input box	To take user inputs	Palette--> User Interface -->Input Box

the viewer under the tag 'Non-visible'.

- We have placed a label as so to name the application.
- All buttons need to be put within the *Horizontal arrangement* so as to keep them aligned horizontally.
- If you have dragged and placed everything, the layout will look something like what's shown in Figure 1.
- Make the necessary property changes, like we did in changing the text property for the label and button components. Table 2 depicts this more clearly.
- Renaming the components helps to identify them in the block editor.
- So now your graphical user interface is ready. The application will look like what's shown in

Figure 1: Designer screen

Table 2

Component	Name it	Description
Label	Heading label	Text: Unit converter
Horizontal arrangement	Default	Length: Fill parent Container for following components
Button	ConvertButton	Text: Convert
List picker	FromListPicker	Text: Select Width: Fill Parent
List picker	ToListPicker	Text: Select Width: Fill Parent
Check box	WeightCheck-Box	Text: Weight Font size: 18 Length: Fill parent
Check box	LengthCheck-Box	Text: Length Font size: 18 Length: Fill parent
Check box	Temperature-CheckBox	Text: Temperature Font size: 18 Length: Fill parent

Figure 2: How the application looks

Figure 2 after the installation.

- Figure 3 gives the hierarchy of the components that we have dragged to the designer.
- If you are confused after looking at the designer and the components viewer, let me explain things a bit more. Here is the hierarchy that we have placed for our application.

- At the top, we have the title for our application. It's always a good practice to name your application and display it on the screen as well. We have put a label for that and have set its text property to the name of the application.
