

output is shown in Figure 9.

```
import pygal
bar_chart = pygal.Bar()
bar_chart.add('Fibonacci', [0, 1, 1, 2, 3, 5, 8, 13, 21, 34, 55])
bar_chart.render_to_file('bar_chart.svg')
```

Some of the chart types supported by Pygal are listed below:

- Line
- Bar
- Histogram
- Pie
- Radar
- Box
- Dot
- Gauge
- Pyramid
- Treemap, etc.

A sample code snippet to build a dot chart with Pygal is

Figure 10: Pygal – Dot chart

shown below and the output is shown in Figure 10.

```
dot_chart = pygal.Dot(x_label_rotation=30)
dot_chart.title = 'V8 benchmark results'
dot_chart.x_labels = ['Richards', 'DeltaBlue', 'Crypto', 'RayTrace', 'EarleyBoyer', 'RegExp', 'Splay', 'NavierStokes']
dot_chart.add('Chrome', [6395, 8212, 7520, 7218, 12464, 1660, 2123, 8607])
dot_chart.add('Firefox', [7473, 8099, 11700, 2651, 6361, 1044, 3797, 9450])
dot_chart.add('Opera', [3472, 2933, 4203, 5229, 5810, 1828, 9013, 4669])
dot_chart.add('IE', [43, 41, 59, 79, 144, 136, 34, 102])
dot_chart.render()
```

This article has provided only an introduction to five plotting libraries available in Python. Each of these libraries has lots of features, which may be explored from the official documentation of the respective libraries. The choice of a particular library entirely depends on the nature of the task, the hardware and software ecosystem in which the task needs to be completed, and also the developers' expertise.
