

The Best Android Phones of 2016

Who wouldn't like to buy a top-of-the-line Android phone? However, there are so many options and brands to choose from. This little guide gives you the specs and features of the top 10 Android phones introduced in 2016. Choose wisely.

Android phones have dominated the mobile and tablet market for the last four to five years. Picking up the best Android smartphone from the wide range offered by top companies like Samsung, LG, Sony, etc, has become a real challenge. This is more so as various local companies and some Chinese companies have entered the market with phones that are cheap, yet have advanced configurations.

Android phones seem to have little competition from other platforms like iOS, Windows Phone, etc. From sleek devices with premium designs, power-house configurations and smart features, to all-round great devices, these affordable phones have grabbed substantial market share. The Android ecosystem is populated by a staggering variety of attractive phones.

This article presents a line-up of the top Android phones of 2016. The main focus here is on flagship devices, by which we mean the best-in-class with regard to the processor, decent RAM, high end and feature-rich cameras, high speed and fully loaded connectivity options, full to Quad-HD display, decent battery life, the latest version of Android (Marshmallow/Nougat) and much more.

1. Google Pixel XL

Google has partnered with multiple phone makers over the past couple of years. But, in 2016, it finally introduced a smartphone made entirely by Google itself. The software and hardware design were done in-house by Google, incorporating some of the best features – particularly with regard to the software and camera, when compared to Samsung Galaxy 7 and iPhone 7.

Technical specifications
