

Choose From These Ten Popular Android Tablets

If you are interested in purchasing a tablet, this article will point you to the ten most popular Android tablets and inform you on their strong points.

Digitisation has made people everywhere use electronic devices like smartphones, computers and laptops to perform all kinds of tasks in a smarter way. Tablets are another way of accessing the Internet, playing games and communicating with others. They fit in your palm and are light enough to carry anywhere, easily. With a tablet, you can do as many things as you can with a computer or smartphone. You can browse the Web, play games, send and receive emails, and much more.

A tablet is a thin, flat mobile computer with a touchscreen display and many other features. The touchscreen display recognises finger prints or gestures, which it takes as inputs, replacing the mouse and keyboard. It is also equipped with many advanced features and sensors including digital cameras, microphones, etc. Tablets are typically larger than smartphones with screens measuring 17.8cm (7 inches) or more. They have the functionality of the modern smartphone and run on a dedicated mobile operating system. You can read a book that you have loaded onto the tablet, or you can play games and surf the Internet.

Android tablets are different

Today, Android devices dominate the world in comparison to BlackBerry and Apple devices. There are many versions of Android, with additional functionality and new interfaces coming out every day. The Android platform has been made available under a developer-friendly open source licence that gives more freedom and flexibility to device manufacturers when designing their products. Android is different from iPhone, BlackBerry or Symbian in primarily two aspects—flexibility and diversity. Android is more user-friendly and, being open source, anyone can access and customise it as per their needs.

Android tablets include almost all the key features found in a regular tablet PC, including office applications, games, Web browsers and many other programs. They are centred on applications or apps. Hence, the Android icons are prominent and the home screen is simple. You can delete and modify all the apps except the dialler, application tray and Web Earth. There are four buttons for navigation and a wonderful notification bar at the top of the screen.
