

The widget is the key feature of Android tablets and includes weather, calendar, clock, GPS and Bluetooth. In addition, you can customise the Android tablet to suit your needs. Geeks often replace the entire functionality of the Android operating system with a custom read-only memory.

Android tablet hardware

There are many varieties of Android tablets available in the market. You can find many differences between Android tablets because they are manufactured and designed by different companies. Hence, it is very difficult to sum up their specifications. Android tablets are really just specialised computers. In general, most tablets contain the following hardware components:

- A processor
- Memory chips
- Bluetooth chip
- FM tuner
- At least one camera
- A storage chip and possibly a slot for additional storage
- A battery
- A graphics processor
- Speakers
- A variety of sensors like accelerometers, a compass and light sensors
- GPS receiver
- Wi-Fi antenna

How to choose an Android tablet

Before buying an Android tablet, you need to ask yourself a few questions,

like how much are you willing to spend and whether you are prepared for a device that involves a sharp learning curve. Navigating an Android device is a learning experience. On the other hand, the operating system is friendlier and, being open source, you can tweak the settings and customise the device for yourself. Android tablets are budget-friendly, but there are dozens of different Android tablets from various manufacturers available on the market. The price of the tablet indicates the materials used to make it and the version of the operating system.

Top 10 popular Android tablets in the world

If you are looking for a tablet and thinking about buying an Android device, then there are many options for you. Let us look at some of the best-known Android tablets (a comparison of these tablets is given in Table 1).

1. Google Pixel C

This is perhaps the best Android tablet at its price and comes with many special features. Google Pixel C has a fantastic display, a fast and powerful processor, and a premium design. However, it is a bit heavy to carry and expensive. Its keyboard dock is not fully utilised by the Android interface. This tablet is equipped with a very good touchscreen. It has a clean stock Android interface, metal body and a great screen. It comes with a big 25.9cm (10.2-inch) display, a 34.2Whr battery and the Android

6.0 Marshmallow OS. The Pixel C is powered by NVIDIA's Tegra X1 processor and comes with 3 gigabytes of RAM. It comes with a non-removable battery, and you can upgrade the device to Android 7.1 Nougat.

2. Samsung Galaxy Tab S2

This tablet comes with a thin, light design, a great screen, a good battery life and a decent camera. There are plenty of reasons to invest your money in the Samsung Galaxy Tab S2. You can use this tablet for both reading and Web surfing. The videos work better because of the power of its processor. The Tab S2 is available in 20.3cm (8 inches) and 25.4cm (10 inches) variants, with the smaller option being more portable and cheaper. This tablet is powerful and has a slicker version of Samsung's Touch Wiz interface.
