

Feature summary

Here is the summary of some more features of LoopBack, which do prove that it can be the perfect choice for a 'Backend as a Service' (BaaS) for Web applications, and for connected smart devices in IoT applications.

- Extends REST API using remote methods, remote hooks and operational hooks.
- Model hierarchy and relationships for real world object mapping.
- Data validation mechanism for model instances before storing in data source.
- Routing and middleware similar to Express.js.
- Real-time 'server sent events' (SSE) support for live updates.
- Client-side SDKs for Android, iOS, Xamarian and Angular.JS apps to interact with models in an elegant mode, eliminating clunky HTTP interfaces and complex data formats.
- Sends push notifications using Apple Push Notification Service (APNS) for iOS and Google Cloud Messaging (GCM) services for Android apps.
- Auto generation of Angular services for client-side representation of models.
- OAuth2.0 and Passport based authentication for third party logins.
- Components for content management on popular cloud storage providers.
- Offline synchronisation support.
- Ease of deployment on PaaS platforms like Bluemix, OpenShift, Heroku, etc.

LoopBack can also be a perfect choice for 'Mobile Backend as a Service' (MBaaS), especially with its support for client SDKs, push notifications, offline synchronisation and cloud deployment. You can find the entire code for the example discussed in this article at github.com/rajeshsola/iot-examples/tree/master/loopback-demo, and some more hints on the README page of this directory.

Electronics Projects Vol. 26 is the latest volume in the series, available in digital form.

It is a compilation of **21 construction projects and 71 circuit ideas** published in **Electronics For You** magazine.

This collection of tested circuit ideas and construction projects in a handy volume would interest all classes of electronics enthusiasts—be they students, teachers, hobbyists or professionals!

Electronics Projects Vol. 26 is available on the following digital magazine stores:

- www.lulu.com
- www.magzter.com
- Createspace.com
- www.readwhere.com
