

Figure 5: Displaying the form output using MeteorJS

```
if (Meteor.isClient) {
  var mySessionData = {
    mykey1: "ParameterValue1",
    mykey2: "ParameterValue2"
  }
  Session.set('myMeteorSession', mySessionData);
  var mysessiondatalog = Session.get('myMeteorSession');
  console.log(mysessiondatalog);
}
```

On execution of the scripts, the log of stored data can be viewed:

```
Object{mykey1: "ParameterValue1", mykey2: "ParameterValue2"}
```

Extending Meteor with smart packages

Meteor apps can be integrated with a number of APIs and smart packages to extend the existing features. Meteor smart packages can be downloaded with the related installation instructions from <https://atmospherejs.com>.

The main reason for adopting and working with MeteorJS is that developers can code the entire app in one language, which is JavaScript. While in other platforms the integration

Figure 7: Searching the package for Twitter accounts on AtmosphereJS

of multiple languages may be required, this is not an issue in Meteor. In addition, the apps developed in Meteor are in real-time and based on the reactive programming model, by default; so they work in high performance mode without any delays. A number of smart packages and modules are available with Meteor to integrate Google Apps, Facebook, Twitter and other platforms without any complexities.
