```

Figure 6: Monaca debug

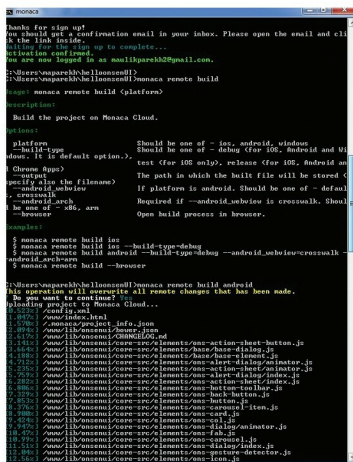

Figure 7: Monaca build started

As you can see in Figures 5,6,7 and 8, the project has been successfully updated in the cloud and we have an APK file created, which we can install on an Android mobile. Likewise, we can create it for other operating systems too.

Now we will log in into Monaca Cloud to check if the application has been deployed or not.

From Figure 9, we can see that the app is deployed on the cloud. We can do the entire app development online in Monaca Cloud and also build it online. Such is the power of Monaca.

We have seen the basic ‘hello world’ version of the Onsen UI using the Monaca CLI. There are many samples available in the links given under ‘References’ below. The link <https://onsen.io/samples/> has more examples of Onsen UI.
