

- **Easy to customise:** Framework 7 provides everything in a simple manner — all styles are divided into smaller units. Lesser files are required to bring out custom layout styles.
- **Other features:** Framework 7 provides many other features. It has native scrolling, is library agnostic, and has page-transition animation and multiple views support. It has hardware accelerated animation using CSS3, and routes pages by using a combination of XHR, caching, browser history and preloading.

2. Ionic Framework

Ionic Framework is an open source software development kit (SDK) for hybrid mobile app development. It is developed on top of Angular.js and Apache Cordova, and provides developers with state-of-art tools and services for developing apps using various Web languages like CSS, HTML5 and Sass. Ionic offers a library of mobile-optimised HTML, CSS and JS CSS components, gestures and tools, and comes with pre-loaded components. Users can develop apps and customise them for Android or iOS, and deploy them via Cordova. Ionic includes mobile components, typography, interactive paradigms and an extensible base theme.

The Ionic Framework is a 100 per cent free and open source project, released under the MIT licence. It will always remain free to use, and is powered by a massive world-wide community. The framework has over 120 native features like Bluetooth, HealthKit, fingerprint authentication, and more, with Cordova and PhoneGap plugins, and TypeScript extensions.

3. jQuery Mobile

jQuery Mobile is regarded as a robust framework to develop cross-platform mobile apps. It supports a wide range of platforms for app development like desktops, smartphones, tablets and e-book reading devices like Kindle. It even integrates various features like semantic mark-up, progressive enhancement, themable design and PhoneGap/Cordova support. One of the many features this framework offers is ThemeRoller, which helps you to create a unique design for your app.

jQuery offers many documents that will help you get in touch with this flexible framework. jQuery Mobile is built on the jQuery base. Therefore, you will have no problems with this framework if you are familiar with the jQuery syntax. The framework is powered by the Ajax navigation system. It ensures smooth animation of pages without any errors.

jQuery is a module-based framework, which allows you to create as many custom builds as you need.

Features

- Compatible with all major desktop browsers as well as all major mobile platforms, including Android, iOS, Windows Phone, BlackBerry, WebOS and Symbian.
- As it is built on top of jQuery core, it has a minimal learning curve for people already familiar with jQuery syntax.
- Has a theming framework that allows users to create custom themes.
- Limited dependencies and lightweight; hence, optimises speed.
- The same underlying code base will automatically scale to any screen.
- HTML5-driven configuration for laying out pages with minimal scripting.
- Ajax-powered navigation with animated page transitions that provide the ability to create semantic URLs through pushState.
- UI widgets that are touch-optimised and platform-agnostic.
