4. Mobile Angular UI used in this framework provides various directives for building UI components like switches, sidebars, etc

Sencha Touch: This is a framework used for building cross-platform end-to-end mobile applications with HTML5 and JavaScript. It is available in both open source and licensed versions. It provides a visual application builder for HTML5, helping to reuse different custom components.

ExtJS, one of the popular JavaScript frameworks, is actually at the core of Sencha touch platform. It helps to create high performance applications with a near-native experience.

Features

1. Consists of ready-to-use widgets with a native look and feel for all the leading platforms like Android, iOS, Windows Phone and BlackBerry
2. Also has a drag-and-drop HTML5 visual application builder with a lot of ready-to-use templates
3. Customised components can be built and added to the library for reuse across mobile applications
