5. If any particular IP address is continuously causing problems in spite of taking the above steps, then consider limiting access to the server: If we have positive proof that any particular IP address or class of

A few facts

- 8.5 per cent of the total content of Wikipedia has been written by Web robots.
- The most active helper-bot online is 'feed fetcher', which helps refresh an individual's Facebook feed on the site's mobile application. Facebook's feed fetcher alone accounts for around 4.4 per cent of all website traffic.
- Web bot operators interpret the bot's results and then make what is called the ALTA report, which is available on their website for paid subscribers. ALTA stands for Asymmetric Language Trend Analysis.

addresses is causing problems to your Web server, then try contacting the owners of such Internet connections. If all this fails, you may consider excluding such addresses from your Web server.

6. Use different server-specific components: If you still have severe problems in avoiding unfriendly Web robots, write server-specific components. This is where you write an extension to your Web server which would dynamically verify different properties of calling programs to check for possible Web bots.
