  "type": "DeviceAlert",
  "request": {
    "type": "rpi.cpuoverload",
    "level": "Warning",
    "message": "CPU Loadavg is very high!!",
    "updateState": false,
    "eventDate": now,
    "metadata": {
      "loadavg": avg,
      "method": "uptime"
    }
  }
}

```

Delivering commands: SiteWhere can send commands to devices through its outbound processors in Protobuf or JSON formats. Devices can receive them through the MQTT Subscribe operation using the topic name `/SiteWhere/system/<hardwareId>` for system generated commands on an event basis and `/SiteWhere/commands/<hardwareId>` for custom commands. You can register a groovy script to trigger custom commands when anomalies are detected in the device measurements as described in <http://documentation.sitewhere.org/tutorials/raspberry-pi.html>. You can also invoke custom commands manually under the *Devices* section. Commands can also be delivered via the Twilio service or CoAP library. Custom commands need to be added in the *Admin* UI under *Device specifications*. We can find the triggered command by parsing the received payload.

Acknowledging commands: The device can acknowledge delivered commands by publishing a suitable payload, by quoting back the original event ID and device response as described in documentation.sitewhere.org/userguide/sending-data.html. You can observe all these events by browsing the target device or associated site in the admin interface. You can also list the events through various REST APIs on the specified path with the GET method and suitable tokens.

REST API

Most of the platform's functionality is available through various REST APIs, apart from the *Admin* interface, and any external entity can avail these services. For simple, interactive usage of these APIs, a Swagger UI is added to make suitable requests and check the response in JSON format.

Here are some examples of REST calls with the following common headers for authentication purposes.

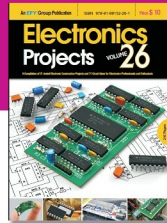

```

Headers: {
  Authorization: Basic
  Credentials: admin:password
}

```

Electronics Projects Vol. 26 is the latest volume in the series, available in digital form.

It is a compilation of
**21 construction projects and
71 circuit ideas** published in
Electronics For You magazine.

This collection of tested circuit ideas and construction projects in a handy volume would interest all classes of electronics enthusiasts—be they students, teachers, hobbyists or professionals!

**Electronics Projects Vol. 26 is available on
the following digital magazine stores:**

- www.lulu.com
- www.magzter.com
- Createspace.com
- www.readwhere.com
