

Are You In Suspense?

Are you wondering what happened to your order or payment, even after a fortnight? But did you mention your name and address clearly while sending payment, and what the payment was for?

We get several payments every month without adequate instructions or even identity of the person sending the payment. As a result we are unable to take appropriate action on these, till we get a complaint - if at all.

At EFY, we want you to be our satisfied customer. So please do let us know in case your payment or instructions are not even acknowledged within a fortnight. We are not that lazy!

EFYGROUP
Technology Drives Us

“Our excitement about HTML5 video has remained strong over the past four years. Plugin-free playback that works seamlessly on all major platforms helps us deliver compelling experiences no matter how you choose to watch,” the Netflix engineering team reported.

Going forward, Netflix is aiming to enhance video streaming using 4K (Ultra-HD) resolution as well as HDR support. Hardware such as Netflix-supported televisions and Google Chromecast are already supporting Dolby Vision and HDR10 formats. These features are likely to reach Linux systems following their debut on Windows and Mac machines.

In the meantime, you can start watching Netflix videos on your Linux OS by installing at least Firefox 47. The update is initially bringing out content in 720p (HD), though it would be expanded to 1080p at a later stage.

NEC joins FIWARE Foundation to add open source flavour to smart city systems

NEC Corporation, the company behind major IT-integrating network technologies, has joined the non-profit FIWARE Foundation as a platinum member. This is to enable open source technologies for smart city focused systems.

FIWARE works as an open source middleware platform – designed to promote the cross-industry use of data and promote service collaborations among the companies and municipalities that provide public services. The solution was developed under the European Union’s Future Internet Public-Private Partnership (FI-PPP) project.

It has been adopted by a large number of cities and companies across Europe and some other parts of the world.

“The FIWARE Foundation is a visible commitment of European businesses to bring more innovative Internet services to consumers, citizens, businesses and the public sector,” said Ulrich Ahle, CEO of the FIWARE Foundation. “We welcome NEC as a platinum member of the FIWARE Foundation, and are looking forward to writing the future story of FIWARE together with NEC,” he added.

NEC will join the board of directors and technical steering committee of the FIWARE Foundation that serves the community as the decision-making authority for FIWARE technologies. The NEC team will also contribute to development, standardisation and promotion of FIWARE technology to accelerate smart city and smart industry businesses utilising Internet of Things (IoT).

“NEC will provide advanced social solutions and contribute to the realisation of a super smart society (Society 5.0), for which FIWARE’s unique capabilities, including cross-industrial use of data and service collaborations, will play a crucial role,” said Yasunori Mochizuki, senior vice president of IoT strategy, NEC Corporation.

The Germany-headquartered FIWARE Foundation is empowering some of the leading smart city projects worldwide. There are FIWARE-based solutions in Santander, Spain, to advance the waste collection management service in the city. Wellington in New Zealand has also deployed the open source software to forecast traffic volumes and analyse environmental situations.

NEC is set to leverage FIWARE to develop a model for industrial waste collection services in Kawasaki City in Japan. This would be the first project on Japanese soil to use the advanced middleware solution.
