

DVD OF THE MONTH

Here's the latest version of Ubuntu for your desktop.

Ubuntu 17.04 Desktop

Ubuntu is used on the smallest of devices to the largest cloud server. All the essential applications, like an office suite, browsers, email and media apps come pre-installed, and thousands of games and applications are available in the Ubuntu Software Centre. With its 17.04 release, Ubuntu switches from swap partitions to using swap files, by default.

Lubuntu 17.04

Lubuntu is an official Ubuntu flavour based on the Lightweight X11 Desktop Environment (LXDE). Lubuntu specifically targets older machines with lower resources, but also runs very well on newer hardware. The bundled DVD comes with the ISO image of the 32-bit edition.

KDE Neon

This is the latest and supposedly greatest of the KDE community's software packaged on a rock-solid base. Most users will want to use the packages built from released software, which will be available soon. KDE Neon will provide users with more up-to-date packages of Qt and cutting-edge KDE software.

Rockstor 3.9.0

You can build and manage your own Linux and BTRFS powered advanced NAS and cloud storage with ease—Rockstor 3.9.0 provides a solid platform and empowers users to deploy effective storage solutions.

What is a live DVD?

A live CD/DVD or live disk contains a bootable operating system, the core program of any computer, which is designed to run all your programs and manage all your hardware and software.

Live CDs/DVDs have the ability to run a complete, modern OS on a computer even without secondary storage, such as a hard disk drive. The CD/DVD directly runs the OS and other applications from the DVD drive itself. Thus, a live disk allows you to try the OS before you install it, without erasing or installing anything on your current system. Such disks are used to demonstrate features or try out a release. They are also used for testing hardware functionality, before actual installation. To run a live DVD, you need to boot your computer using the disk in the ROM drive. To know how to set a boot device in BIOS, please refer to the hardware documentation for your computer/laptop.
