Adafruit WebIDE

Adafruit WebIDE provides a Web based interface for Raspberry Pi users to perform programming functions, and allows developers to compile the source code of various languages like Python, Ruby, JavaScript and many others.

Adafruit IDE allows developers to put the code in a GIT repository, which can be accessed anywhere via GitHub.

Features

- Can be accessed via Web browser on ports 8080 or 80.
- Supports the easy compilation and running of source code.
- Bundled with a debugger and visualiser for proper tracking, the navigation of code and to test source code.

Official website: <https://learn.adafruit.com/webide/overview>

AlgoIDE

AlgoIDE is a combination of a scripting language and an IDE environment, designed to function together to take programming to the next paradigm. It incorporates a powerful debugger, real-time scope explorer and executes the code, step by step. It is basically designed for all age groups to design programs and do extensive research on algorithms.

It supports various types of languages like C, C++, Python, Java, Smalltalk, Objective C, ActionScript, and many more.

Features

- Automatic indentation and completion of source code.
- Effective syntax highlighting and error management.
- Contains a debugger, scope explorer and dynamic help system.
- Supports GUI and traditional Logo programming language Turtle for the development of source code.

Latest version: 2016-12-08 (when it was last updated)

Official website: <http://www.algoide.net/>

Ninja IDE

Ninja IDE (Not Just Another IDE), which was designed by Diego Sarmentero, Horacio Duranm Gabriel Acosta, Pedro Mourelle and Jose Rostango, is written purely in Python and supports multiple platforms like Linux, Mac OS X and Windows, for execution. It is regarded as a cross-platform IDE software, especially designed to build Python based applications.

Ninja IDE is very lightweight and performs various functions like file handling, code locating, going to lines, tabs, automatic indentation of code and editor zoom. Apart from Python, several other languages are supported by this IDE.

Features

- An efficient code editor:** Ninja-IDE is regarded as the most efficient code editor as it performs various functions like code completion and code indentation, and functions as an assistant.
