

Figure 8: CodeBlock IDE interface

Greenfoot IDE

Greenfoot IDE was designed by Michael Kolling at the University of Kent. It is a cross-platform Java based IDE basically designed for educational purposes for high schools and undergraduate students. The Greenfoot IDE features project management, automatic code completion and syntax highlighting, and has an easy GUI interface.

Greenfoot IDE programming consists of sub-classing of two main classes — World and Actor. World represents the class where the main execution occurs. Actors are objects that exist and act in World.

Features

- Simple and easy-to-use GUI, which is more interactive than BlueJ and other IDEs.
- Easy to use even for newbies and beginners.
- Highly powerful in executing Java code.
- Supports GNOME/KDE/X11 graphical environments.
- Other features include project management, auto-

completion, syntax highlighting and auto-correction of errors.

Latest version: 3.1.0
