

DVD OF THE MONTH

Test and secure your applications.

BackBox Linux 5 Live

This distro is designed to be fast, easy to use and provide a minimal yet complete desktop environment. It is a penetration testing and security assessment oriented Linux distribution, which offers a network and systems analysis toolkit. It includes some of the most commonly known/used security and analysis tools, ranging from Web application and network analysis to stress tests, sniffing, vulnerability assessment, computer forensic analysis, and automotive and exploitation testing.

Mageia 6 GNOME Live (64-bit)

Mageia is a GNU/Linux-based operating system. It is a community project, supported by a non-profit organisation comprising elected contributors. The latest stable release of the project, Mageia 6, was developed for over two years before being released officially. It will be supported with security and bug fix updates for 18 months, up to January 16, 2019. The bundled ISO image is for the live GNOME edition, which can also be installed on your computer. The live DVD contains all the supported locales and a preselection of software, making it a faster way to get started working with Mageia.

What is a live DVD?

A live CD/DVD or live disk contains a bootable operating system, the core program of any computer, which is designed to run your programs and manage all your hardware and software.

Live CDs/DVDs have the ability to run a complete, modern OS on a computer even without secondary storage, such as a hard disk drive. The CD/DVD directly runs the OS and other applications from the DVD drive itself. Thus, a live disk allows you to try the OS before you install it, without erasing or installing anything on your current system. Such disks are used to demonstrate features or try out a release. They are also used for testing hardware functionality, before actual installation. To run a live DVD, you need to boot your computer using the disk in the ROM drive. To know how to set a boot device in BIOS, please refer to the hardware documentation for your computer/laptop.
