

- Download the latest version of XAMPP on your systems from the website <https://www.apachefriends.org/download.html>. After the download is complete, install it in your machine.
- By default, XAMPP is installed in your machine's C drive, but if you have specified any other directory in the installation process, go to that directory and create a folder named *PHPDevelopment* inside the *htdocs* folder in your XAMPP installation directory folder. For example, *C:\xampp\htdocs\PHPDevelopment*.
- Now start the XAMPP control panel and click on the *Start button* to start Apache.
- Create a text file inside the above folder named *AddTwoNumbers.php* and copy the following code inside it:

```
<!DOCTYPE html>
<html>
<head>

    <title>Sum</title>
</head>
<body>
<h3>Addition Of Two Numbers</h3>
<form>

    <div>Number 1:</div>
    <input type="text" name="num1"/>
    <div>Number 2:</div>
    <input type="text" name="num2"/>
    <div><input type="submit" value="CALCULATE SUM"></div><br>
</form>

<?php
if (isset($_GET['num1']) && isset($_GET['num2'])) {

    $num1 = $_GET['num1'];
    $num2 = $_GET['num2'];
    $sum = $num1 + $num2;
    echo "Sum of $num1 and $num2 is $sum";

}
?>

</body>
</html>
```

Figure 2: Screenshot of the list of files in your directory

Figure 3: PHP program when run on the browser

- Now type *localhost/ PHPDevelopment* and it will list all the files in your directory on your browser, as shown in Figure 2.
- Click on *AddTwoNumbers.php* and you will be directed to the required page, where you can perform the addition of two numbers.

Here, you can see that the form has been created using HTML and the corresponding addition of the numbers is done using PHP. Now start your Web development using PHP. You can also make use of the various frameworks available to simplify development and lessen your coding time. Happy coding!
