

Table 1: A comparison of open source Web app testing tools

Title	Company	Scope	Application rights	User interface available	Supported technology
JMeter	Apache	Test automation framework; Testing tool	Free use, open source	Batch mode, plugin, standalone application	JDBC driver, JMS, LDAP CORBA, IMAP, POP3, SMTP, SOAP, Web, HTTP, HTTPS
SeleniumHQ	GitHub project, Google Code Projects, SeleniumHQ	Test automation framework; Testing tool	Free use, open source	Integrated into ALM, Maven; standalone application; Web based	Adobe Flash, Ajax, .NET, DOM, Java GUI, Android apps, Silverlight, CSS, HTML, HTTP, Xpath
Capybara	GitHub project	Test automation framework; Testing tool	Free use, open source	COM API; Tool extension; Web based	Web, Web services
Sahi Pro	Tyto Software	Test automation framework; Testing tool	Commercial, trial	Command line	Adobe Flex, Ajax, Java, PHP, RubyOnRails, HTTPS, JavaScript
WebLOAD	RadView Software	Cloud services; Testing tool	Commercial, demo, free use, trial		Mobile applications, Web

of the enhanced features like test distribution and report customisation. Sahi runs as a proxy server; the proxy settings are configured to point to Sahi's proxy and then inject JavaScript event handlers into Web pages.

The pros of Sahi

- Sahi can achieve most of the automation with the available functions and variables. It has all the inbuilt APIs required for complex tasks. Sahi also has multi-browser support.
- It does not require additional tools to run and execute the tests. All the tests run from the inbuilt Sahi Controller.

The cons of Sahi

- Compared to Selenium, Sahi is difficult to start as it involves a complex installation process. It also has a very confusing interface.
- It does not provide the same visibility that Selenium does, is less popular and has the smallest and least developed community.

5. WebLOAD: The best load-runner alternative

WebLOAD is an enterprise-scale load testing tool which features a comprehensive IDE, a load generation console,

and a sophisticated analytics dashboard. WebLOAD has built-in flexibility, allowing QA and DevOps teams to create complex load testing scenarios thanks to native JavaScripting. WebLOAD supports hundreds of technologies – from Web protocols and enterprise applications to network and server technologies.

The pros of WebLOAD

- It has native JavaScript scripting.
- UI wizards enhance the script.
- It supports many technologies.
- It offers easy-to-reach customer support.

The cons of WebLOAD

- It does not support Citrix.
- It does not support the SAP GUI.
- It does not support RDP and RTE.

Table 1 compares the merits of all the testing solutions.
