

Important for IT professionals to be familiar with DevOps: Linux Foundation survey

According to a recent survey released by the Linux Foundation, enterprise IT organisations now prefer to hire IT professionals who have experience with both open source software and DevOps. The survey, which was conducted in collaboration with edX, a leading global online learning platform, polled 1,672 open source professionals and 559 respondents with hiring responsibility for open source professionals.

In terms of the most sought-after skills, 69 per cent of employers said they want IT professionals with cloud and container technology expertise, followed by Linux (61 per cent) and DevOps/GitOps/DevSecOps expertise (57 per cent). Another 40 per cent are looking for people with cybersecurity skills. Over three-quarters (79 per cent) said being familiar with DevOps was either very important (44 per cent) or extremely important (35 per cent).

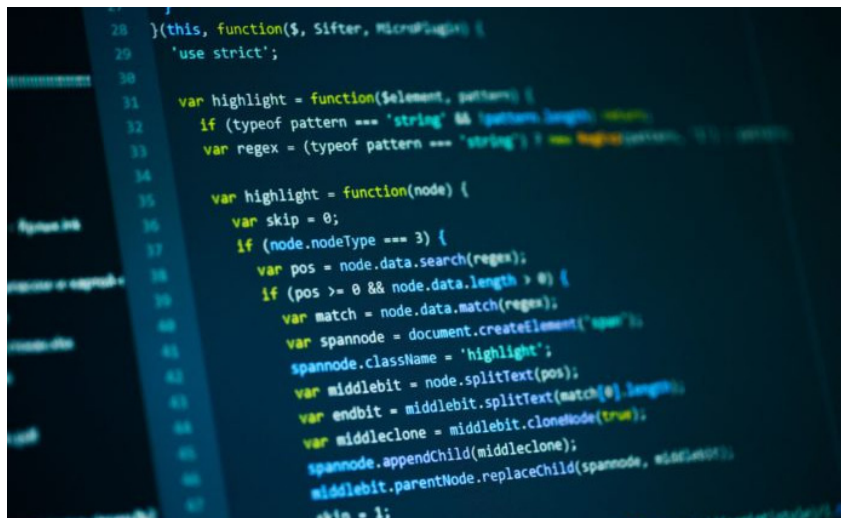

According to Clyde Seepersad,

senior vice president and general manager for training and certifications at the Linux Foundation, when salary and benefits are equal, more IT professionals prefer to work for organisations that are clearly viewed as open source software leaders. Organisations that want to attract the best IT talent should make an effort to be seen as significant contributors to open source software projects.

However, only 43 per cent of employers identified training as a way to fill current skill gaps. Another 41 per cent reported hiring consultants to fill these gaps. Only 16 per cent of those polled said they were willing to postpone projects due to a skills shortage.

station sensors located throughout the exhibit hall as well as various locations around the world. The demo featured the CORE-V MCU, CORE-V SDK, and the interconnection of IoT sensors and applications to AWS, with local temperature readings on the CORE-V MCU DevKit NexysA7 board.

The Ashling-led DevKit SDK includes an IDE, debugger, GCC compiler (supplied by Embecosm), the FreeRTOS real-time OS, and AWS IoT ExpressLink connectivity via Espressif's RISC-V-based Wi-Fi radio over AWS IoT ExpressLink. This project showcases the open source collaborative development of industry-grade CORE-V processor IP with supporting hardware and software by a diverse group of OpenHW members.

Less than half of businesses have an open source security policy

According to new Linux Foundation research, 41 per cent of organisations lack confidence in their open source security, with only 49 per cent claiming to have a policy in place. The State of Open Source Security report, co-sponsored by Snyk, was compiled from interviews with 550 open source stakeholders as well as data from Snyk Open Source, which scanned over 1.3 billion open source projects.

The use of open source repositories to accelerate time-to-market is common among developers, but it can expose organisations to hidden risks if these
