

Streamlit: Streamlit gives data scientists and ML experts access to assorted machine learning models. It is open source and compatible with cloud deployments. The ML models can be made ready to be used with data sets in a few moments.

Hugging Face: This is another platform with pre-trained models and architectures for ML and AI in a range of categories. Many corporate giants are

- Audio-to-audio processing
- Automatic speech recognition
- Computer vision
- Fill-mask
- Image classification
- Image segmentation
- Object detection

- The problem solvers available in Hugging Face are optimised and effective, helping models to be deployed rapidly (Figure 5).

These cloud based platforms are useful for researchers, practitioners and data scientists in multiple domains, and simplify the development of real-world applications that perform well. **END**
