

Now, Lens is ready to use.

Let's deploy <https://github.com/GoogleCloudPlatform/microservices-demo>, which is a cloud-native microservices demo application. It has 11-tier microservices applications, and is a Web based e-commerce app.

Download the application and extract it locally in the system where you have downloaded and configured minikube.

Go to the *release* directory and execute the following command.

```
kubectl apply -f kubernetes-manifests.yaml
```

```
deployment.apps/emailservice created
```

```
service/emailservice created
```

```
deployment.apps/checkoutservice created
```
