

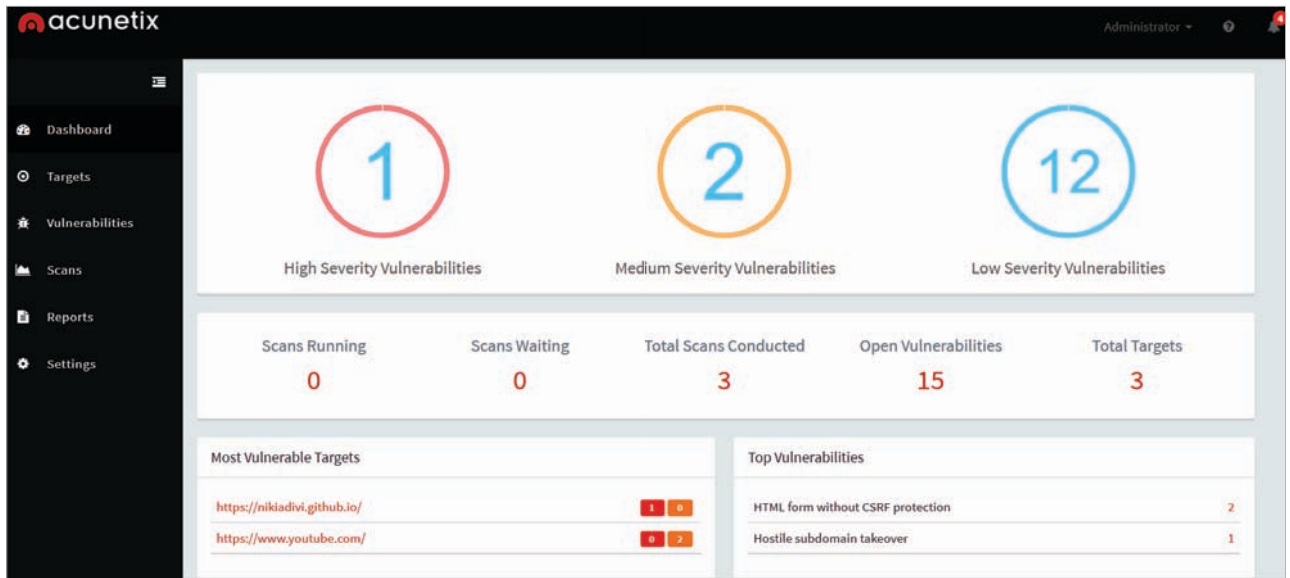

Figure 2: Dashboard of Acunetix

The 'Add Target' pop-up form allows users to add new targets to the Acunetix system. It includes fields for the target's address and a description. The address field contains <https://nikiadivi.github.io/> and the description field contains 'Nikki Portfolio'. At the bottom right, there are 'Add Target' and 'Close' buttons.

Figure 3: 'Add Target' pop-up

The 'Target Info' page displays configuration options for the target <https://nikiadivi.github.io/>. It includes a description field with 'Nikki Portfolio', a 'Business Criticality' dropdown set to 'Normal', and a 'Scan Speed' slider ranging from 'Slower' to 'Fast', currently set to 'Moderate'. There is also a 'Continuous Scanning' toggle switch. At the bottom, there are two more toggle switches: 'Site Login' and 'AcuSensor', both currently turned off.

Figure 4: Page after adding Target

The 'Login instruction settings' page is used to configure how Acunetix handles site login. It features a 'Site Login' toggle switch at the top, which is currently turned on. Below this, there are two radio button options: 'Try to auto-login into the site' (selected) and 'Use pre-recorded login sequence'. The 'Try to auto-login into the site' option includes a text box for 'User Name', a text box for 'Password', and a text box for 'Retype Password'. The 'Use pre-recorded login sequence' option includes a text box for 'Pre-recorded login sequence'. A detailed explanation of the auto-login process is provided below the radio buttons.

Try to auto-login into the site

Website's forms authentication in some cases can be identified automatically. The automatic detection will try to identify the steps necessary to log in, the restricted links which should not be clicked in order to keep the session and the pattern by which a valid session can be identified. Please enter your credentials below.

User Name:

Password:

Retype Password:

Use pre-recorded login sequence

If your website requires forms authentication, you need to record the steps required to login on the website. This will be saved as a login sequence file and can be used later. You can also specify a section of the website which you do not want to be crawled (for example links that will log you out from the website).
