

JanusWeb: This open source web framework helps create a collaborative VR experience for users, and transforms a 2D website into 3D. Powered using JavaScript and HTML, it enables developers to create 3D interactive worlds for PCs, smartphones and VR headsets.

GitHub link: <https://github.com/jbaicoianu/janusweb>

Blender: This is an open source 3D modelling program to create 3D visuals.

Website: <https://www.blender.org/>

WebXR Device API: This open source project provides standard APIs for web app developers to design interactive apps with VR/AR headsets.

Website: <https://www.w3.org/TR/webxr/>

BlueJeans: This is a strong platform for creating 3D content for VR, AR, virtual avatars and AI based chatbots.

Website: <https://www.bluejeans.com/>

Reyder: This supports the design and development of immersive 3D, AR and metaverse solutions across the web.

Website: <https://www.reydar.com/>

Commercial metaverse platforms at a glance

Many commercial metaverse platforms have been launched recently.

- Tardi World is the popular virtual event platform for hosting virtual marriage receptions and attendees (friends and relatives across the world). Here, gifts are deposited as cryptocurrencies through Zion Verse.
- JP Morgan was the first bank to open its ONYX virtual bank (marketing lounge) in Decentraland (Dessland) metaverse. Decentraland is a blockchain based virtual world where users can buy, sell, and

develop virtual real estate, interact with other users, and even build and deploy decentralised applications.

- South Korea's Kookmin Bank has opened a customer service centre in the metaverse aiming for personalised consultation to its customers.
- Tintra is developing a new-age web 3.0 solution called Metaverse Bank, which offers fully-functional private and investment solutions for end users with immersive services.
- NextMeet platform is very popular in the US. It hosts virtual (immersive) art exhibitions where visitors across the world participate, and even purchase art works through cryptocurrencies.
- Second Life has introduced a metaverse social platform for people to interact and create new friendships/relations. In this virtual world, users can create their avatars, interact with other users, explore various virtual environments, and even participate in the virtual economy by buying and selling virtual goods and services.
- LokaLocal has introduced virtual touring in a metaverse world that has 3D real-world maps of popular cities/places.
- Roblox is a game development platform where users can create

their own games using Roblox's proprietary game development engine and publish them on the platform for other users to play. Gucci has set up a virtual fashion house on the Roblox platform. Its retail store offers an immersive experience for digitally-wearable virtual clothes.

- High Fidelity is a metaverse platform that enables users to create their avatars, interact with other users, and even build their own virtual environments using High Fidelity's proprietary development tools.
- Each of these metaverse platforms has its unique features and use cases, and all of them provide opportunities for businesses and entrepreneurs to develop innovative applications and services.

Many more popular platforms have evolved in the last couple of years like Airmeet (virtual corporate events and meetups), Enjin (fashion design), Upland (showroom for sale), and BeyondLifeClub (themed wedding receptions). Latus Health offers digital twins for medical consultation, and Zippy sets up virtual marathons for runners with virtual coach training.

The metaverse commercial platform list is long — it will get longer as the technology gets even more popular.
