Verify whether minikube is installed or not using the *minikube version* command.

```
PS C:\WINDOWS\system32> minikube version
minikube version: v1.26.1
commit: 62e108c3dfdec8029a890ad6d8ef96b6461426dc
```

Check the minikube status and profile.

```
PS C:\WINDOWS\system32> minikube status
* Profile "minikube" not found. Run "minikube profile list" to view all profiles.
```

To start a cluster, run: "minikube start"

```
PS C:\WINDOWS\system32> minikube profile list
```

```
* Exiting due to MK_USAGE_NO_PROFILE: No minikube profile was found.
```

```
* Suggestion:
```

You can create one using 'minikube start'.

Install VirtualBox in the Windows system and verify existing status.

Now execute the *minikube start --driver=virtualbox* command.

```
PS C:\WINDOWS\system32> minikube start --driver=virtualbox
```
