

```
* minikube v1.26.1 on Microsoft Windows 10 Home Single
Language 10.0.19044 Build 19044
* Using the virtualbox driver based on user configuration
* Starting control plane node minikube in cluster minikube
* Creating virtualbox VM (CPUs=2, Memory=3000MB,
Disk=20000MB) ...
! This VM is having trouble accessing https://k8s.gcr.io
* To pull new external images, you may need to configure
a proxy: https://minikube.sigs.k8s.io/docs/reference/
networking/proxy/
* Preparing Kubernetes v1.24.3 on Docker 20.10.17 ...
- Generating certificates and keys ...
- Booting up control plane ...
- Configuring RBAC rules ...
- Using image gcr.io/k8s-minikube/storage-provisioner:v5
<Output Snipped>
```

Next, you can verify minikube status.

```
PS C:\WINDOWS\system32> minikube status
minikube
type: Control Plane
host: Running
kubelet: Running
apiserver: Running
kubeconfig: Configured
```

Virtualbox will now have a minikube virtual machine available, as shown in Figure 2.

Next, we will verify the profile list available for minikube.

```
PS C:\WINDOWS\system32> minikube profile list
```

```
|-----|-----|-----|-----|-----|
| Profile | VM Driver | Runtime | IP       | Port |
| Version | Status   | Nodes  | Active  |      |
|-----|-----|-----|-----|-----|
| minikube | virtualbox | docker | 192.168.59.101 | 8443 |
v1.24.3 | Running | 1 | *      |      |
|-----|-----|-----|-----|-----|
```

Table 1 lists some other commands available for minikube.

Table 1

Basic commands	
<i>start</i>	Starts a local Kubernetes cluster
<i>status</i>	Gets the status of a local Kubernetes cluster

<i>stop</i>	Stops a running local Kubernetes cluster
<i>delete</i>	Deletes a local Kubernetes cluster
<i>dashboard</i>	Accesses the Kubernetes dashboard running within the minikube cluster
Images commands	
<i>docker-env</i>	Provides instructions to point your terminal's <i>docker-cli</i> to the Docker engine inside minikube
<i>cache</i>	Manages cache for images
<i>image</i>	Manages images
Configuration and management commands	
<i>addons</i>	Enables or disables a minikube addon
<i>config</i>	Modifies persistent configuration values
<i>profile</i>	Gets or lists the current profiles (clusters)
<i>update-context</i>	Updates <i>kubeconfig</i> in case of an IP or port change
Networking and connectivity commands	
<i>service</i>	Returns a URL to connect to a service
<i>tunnel</i>	Connects to load balancer services
Advanced commands	
<i>mount</i>	Mounts the specified directory into minikube
<i>ssh</i>	Logs into the minikube environment (for debugging)
<i>kubectf</i>	Runs a <i>kubectf</i> binary matching the cluster version
<i>node</i>	Adds, removes, or lists additional nodes
<i>cp</i>	Copies the specified file into minikube
Troubleshooting commands	
<i>ip</i>	Retrieves the IP address of the specified node
<i>logs</i>	Returns logs to debug a local Kubernetes cluster
<i>update-check</i>	Prints current and latest version numbers
<i>version</i>	Prints the version of minikube
<i>options</i>	Shows a list of global command-line options (applies to all commands)
