

Developing a Web Application with the Flask Framework

Flask is a lightweight framework widely used by large companies. This article gives a brief overview of how to build, deploy and launch a Flask web application at both physical and AWS cloud servers.

Flask is an open source micro framework written in Python. It is a lightweight framework that comprises standard libraries and plugins with easy and flexible configurations. Thus, developing web applications using Flask is an ideal choice compared to alternative tools like Django, web2py, and Pyramid.

Why is Flask popular?

Flask is a widely used web application development framework with an inbuilt support for the Python programming language. Its framework has minimal structure. So it provides an ecosystem of external components such as form validation, upload handling, authentications, etc, that can be mixed and matched as needed, focusing on including only what is needed instead of providing a complete toolset. These days the framework is widely used by companies like Samsung, Netflix, Uber, Trivago, Zomato, etc.

Setting up Flask workspace in the Visual Studio Code platform

To work on Flask web application development, make sure you have installed Python on your system. After

```

rhyme@ip-10-199-101-204:~$ python --version
Python 2.7.17
rhyme@ip-10-199-101-204:~$ python -m flask --version
Python 2.7.17
Flask 1.1.4
Werkzeug 1.0.1
rhyme@ip-10-199-101-204:~$

```

Figure 1: Python Flask virtual environment and installed version

```

1 from flask import Flask
2 application = Flask(__name__)
3 @application.route('/')
4 def OSFY():
5     return 'Welcome to OSFY 2022 Flask App'
6 if __name__ == "__main__":
7     application.run()

```

```

rhyme@ip-10-199-101-204:~/Desktop/adityaflaskapp$ python3 aditya.py
* Serving Flask app 'aditya' (lazy loading)
* Environment: production
WARNING: This is a development server. Do not use it in a production deployment.
Use a production WSGI server instead.
* Debug mode: off
* Running on http://127.0.0.1:5000/ (Press CTRL+C to quit)
