

No gatherings
or get-togethers,
yet 6 billion
conversations
everyday.

Making the impossible possible, is a way of life at Yahoo!. Small or big, whatever be the idea, we bring it to life. No wonder, Yahoo! has constantly conceived and delivered worldclass products that touch the lives of over 500 million users. Whether it's email, news & entertainment, sports, music or just about anything else on the net, people turn to Yahoo! Making it the world's most visited site and among the most well-known brands globally, Yahoo! India R&D is a strategic Center that contributes in making Yahoo! what it is.

We are presently looking for technology professionals for the following positions:

Tech Lead - Virtualization R&D

The Cloud Computing group at Yahoo! is chartered with making our data center environment friendly and more efficient. We are working at cutting edge of technology to create internet-scale solutions that meet these goals by leveraging techniques like virtualization. As a member of this team, you will be part of the next wave of Innovation at Yahoo! to transform our data center into Cloud Service Delivery Platform.

The ideal candidate should • Be an M.Tech/MS Computer Science (or equivalent) with minimum of 4+ years industry experience • Be proficient in designing complex enterprise class/internet scale applications addressing requirements like high performance, maintainability & service ability • Have good understanding and hands-on experience of design patterns and best practices for large scale software development • Be expert in Java programming language on UNIX/Linux platform • Have conceptual level understanding of virtualization technologies • Be someone who can bring in fresh ideas and doesn't see the world the way everyone does

Principal Engineer - Performance Engineering

The Performance Engineering team is an expert group that studies, analyzes and improves performance and scalability of key Yahoo! applications. This includes Yahoo! Search, Advertiser-Publisher Technology and our Cloud Computing Infrastructure - Apache Hadoop. This group co-works with product development teams to address top performance & scale challenges ranging from crunching peta-bytes of data every-day to serving relevant search results in milli-seconds. Yahoo! is currently building presence for this expert group in Bangalore and is looking for bright senior engineers. The ideal candidate should possess skills to dive deep into design, code, operating system, and hardware-level details of software execution.

The ideal candidate should • Be an M.Tech/MS Computer Science (or equivalent), 9+ years industry

experience • Have proficiency in C/C++ or Java multi-threaded programming for Java programmers, knowledge JVM internals is a plus • Have solid fundamentals in Operating Systems, Networks and File Systems. Knowledge of Linux internals is a strong plus • Have good understanding of modern multi-core systems, cache and memory architectures • Have strong distributed computing concepts, as applied to large scale (1000+ nodes) systems experience with Apache Hadoop or Map-Reduce is a plus • Background in Performance Optimization or High Performance Computing (HPC) is a plus

Tech Lead - Linux Engineering

The Yinux team is the "Linux Center of Excellence" for all of Yahoo!. This team is responsible for Linux strategy, support and development for virtualized and non-virtualized environments. This team works very closely with Yahoo! properties. Linux vendors and the open source community to provide a stable, secure and scalable infrastructure to build complex Yahoo! applications upon and comprises of a group of highly motivated and energetic kernel, systems and release engineers spread across US and India. As a Linux engineering lead, you will contribute individually to Linux and Linux Kernel adoption in Yahoo! by participating in various activities including • Migrating applications from FreeBSD to Linux • Providing Linux kernel support • Packaging popularly used public domain Linux software for end-use in the Yahoo! environment

The ideal candidate should • Be a B.Tech Computer Science (or equivalent), 7+ years industry experience. M.Tech/MS is a plus • Have extensive experience developing software on a Linux environment. Unix / Linux Kernel development experience is a strong plus • Have a good understanding of packaging and releasing software on Linux, including RPMs • Have excellent software development, debugging and testing skills in C/C++. Background in porting source code to Linux is a plus • Scripting skills in Perl/PHP & Unix shell programming is a plus
