

MOBLIN™ ZONE

MOBLIN™ ZONE

Create rich "PC-like" internet and media experience on mobile devices with Moblin™ v.2

Moblin™ v.2 is an optimized open source Linux software stack and application framework for enabling rich Internet experiences on Intel® Atom™ Processor based MIDs, netbooks, nettops, IVI, and embedded systems.

Moblin™ v.2 provides the most flexible application framework including a 3D UI for developing Rich Internet and media applications that run across multiple Intel® Atom™ Processor based devices with minimal UI adaptation. The new Moblin™ v.2 SDK includes reference code, documentation, and tools to simplify development and provide faster TTM.

To learn more about Moblin™ v.2, visit www.moblinzone.com and register to receive regular updates.

Sell your Moblin™ Apps through the Intel® Atom™ Developer Program.
Earn up to 70% revenue on every sale.
