

PGDay India 2016:

A SUMMARY OF THE SHOW

A conference that witnessed experience-sharing on a wide range of topics by PostgreSQL users and developers was held in Bengaluru on February 26, 2016. Here is a summary of the day.

The annual PostgreSQL PGDay event was held on February 26, 2016, at Courtyard by Marriott in Bengaluru.

The event was a grand success with over 150 attendees representing 50+ companies. This number was more than double the last year's number of participants. What was also interesting to note was that almost 80 per cent of the attendees were from outside the city.

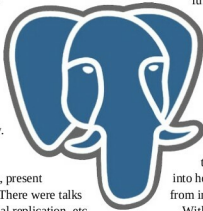

Robert Haas, well-known PostgreSQL contributor, made the keynote address, talking about the past, present and future of this open source database. There were talks on Vacuum, foreign data wrappers, logical replication, etc, in the developer track.

The speakers gave some great insights into customer use cases involving PostgreSQL. The presentation by speakers from the National Informatics Centre got the most applause, thanks to its wholehearted endorsement of PostgreSQL in a myriad projects, ranging from police-FIR systems and education certificates to online appointments at government hospitals. The government's policy of supporting open source and the tremendous

cost savings, with no compromise in performance or functionality, was well received. Speakers from Inmobi, a company that has an enterprise-scale usage of PostgreSQL, talked about performance tips to get the best out of this database, when used on a large scale. The talk around PostgreSQL, which is a distributed multi-master hybrid OLTP/OLAP offering, was also well received.

The event concluded with the DBA track, in which useful insights were given into how to detect and avoid data corruption, apart from inputs about DBA maintenance activities.

With an impressive sponsors list comprising 2ndQuadrant, EnterpriseDB, GE Predix, Ashnik, Tashee Linux Services and OpenSCG, the event was a grand success. The enthusiastic response augurs well for the increased adoption of PostgreSQL in the years to come. **END**
