

Manage File Storage to Give the Best Customer Service

"There's never enough of storage, no matter how big a disk you have," seems to be the refrain of all computer users. There are, of course, various solutions to tide over this problem, especially now, with the arrival of cloud computing. This article takes the reader through the steps required to create a file storage system and its management. It could well set you up as a STaaS (Storage as a Service) provider in cloud computing.

We can't deny the fact that the traditional model of data management and hosting has changed, and users now want their data/resources to be centralised. This is possible because of the innovation of virtualisation technology. It has become much easier for

large organisations and even small businesses to centralise not only their storage but also everything they came across in the IT world. Due to the rapid increase in structured and non-structured data, there is the need for good management of storage, without a waste of resources.
