Free and open source tools for bare metal recovery

Redo Backup and Recovery

URL - <http://redobackup.org>

Redo Backup and Recovery is very user friendly and an effective tool for overall backup and disaster management with bare metal data restoration. With this software, disk based disaster management and restoration at the bare metal level is very effective in case of hardware failure. It is also used as an anti-virus. The complete system backup can be taken even if the hard drive gets burned, or damaged by a virus or due to malicious applications.

Features of Redo Backup and Recovery include:

- No need for installation
- Very small download size of 250MB for live CD
- Boots in a few seconds
- Access to files and folders even without logging in

Figure 1: Download page of Redo Backup and Recovery

- Recovery of all types of files and folders
- Effective and easy graphical user interface (GUI)
- Cross platform (Windows or Linux)
- Can be used for the drives on a local area network without specifying any shared folders or on network attached storage (NAS)
- Dynamic loading without operating system
- Recovery of lost data whether it is deleted intentionally or by any third party application
- Internet can be accessed on booting Redo Backup and Recovery
