

```
console.log(contents.toString());
}, (err) => {
  console.log(err.message)
});
```

Useful fetch module

```
#!/usr/local/bin/node
'use strict';

var fetch = require('node-fetch');
fetch('http://api.icndb.com/jokes/random').then(function
(res) {
  return res.json();
}).then(function (json) {
  console.log(json.value.joke);
});
```

`node-fetch` is a lightweight module to get the contents of a file or URL. It returns a Promise. The above code is a small `node.js` program that fetches a joke from the Internet database and prints it on the console.

Support matrix

Promise is supported in the Chrome, Firefox and Edge

browsers. In non-browser environments, it is supported in the latest versions of Node and Babel. For detailed support, check the Kangax link in *References*.

Many popular JavaScript libraries and frameworks have adopted Promise due to its merit. Some popular ones are jQuery, Ember.js, etc. Understanding Promise is essential for the async feature, which will come with future versions of ECMAScript.
