

practice to specify the *alt* attribute for the image tag. An example is shown below:

```

```

Unordered lists can be created using *C-c C-t* followed by *ul*. It will then prompt you for any attributes that you want included in the tag. You can hit the *Enter* key, which will prompt you with the string 'List item:' to key in list values. An example of the output is shown below:

```
<ul>
<li>One
  <li>Two
    <li>Three
  </li>
</ul>
```

You can neatly align the code by highlighting the above text and indenting the region using *C-M-l*. The resultant output is shown below:

```
<ul>
  <li>One
  <li>Two
  <li>Three
</ul>
```

If you wish to comment out text, you can select the region and type *M-q*. The text is enclosed using '*<!--*' and '*-->*'. For example, the commented address tags in the above example look like what follows:

```
<!-- <address -->
<!-- <a href="mailto:shakthi@achilles">shakthi</a -->
<!-- </address -->
```

A number of major modes exist for different programming environments. You are encouraged to try them out and customise them to your needs.

Figure 1: HTML tags

Accents

In HTML mode, you can insert special characters, accents, symbols and punctuation marks. These characters are mapped to Emacs shortcuts. Some of them are listed in the following table:

Shortcut	Character
C-x 8 'a	á
C-x 8 'e	ê
C-x 8 / E	/E
C-x 8 3/4	¾
C-x 8 C	©
C-x 8 L	£
C-x 8 P	¶
C-x 8 u	µ
C-x 8 R	®
C-x / /	÷

Indentation

Consider the following paragraph:

"When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs; and that you know you can do these things."

You can neatly fit the above text into 80 columns and 25 rows inside GNU Emacs using *M-q*. The result is shown below:

```
When we speak of free software, we are referring
to freedom, not
price. Our General Public Licenses are designed to
make sure that you
have the freedom to distribute copies of free software
(and charge for
this service if you wish), that you receive source code or
can get it
```
