

if you want it, that you can change the software or use pieces of it in new free programs; and that you know you can do these things.

You can also neatly indent regions using the *C-M-l* shortcut. For example, look at the following HTML snippet:

```
<table>
<tr>
<td>Tamil Nadu</td>
<td>Chennai</td>
</tr>
<tr>
<td>Karnataka</td>
<td>Bengaluru</td>
</tr>
<tr>
<td>Punjab</td>
<td>Chandigarh</td>
</tr>
</table>
```

After indenting the region with *C-M-l*, the resultant output is shown below:

```
<table>
<tr>
  <td>Tamil Nadu</td>
  <td>Chennai</td>
</tr>
<tr>
  <td>Karnataka</td>
  <td>Bengaluru</td>
</tr>
<tr>
  <td>Punjab</td>
  <td>Chandigarh</td>
</tr>
</table>
```

If you have a long line which you would like to split, you can use the *C-M-o* shortcut. Consider the quote:

"When you're running a startup, your competitors decide how hard you work." Paul Graham

If you keep the cursor after the comma, and use *C-M-o*, the result is shown below:

"When you're running a startup,
your competitors decide how hard you work." Paul Graham

Magit

Magit is a fantastic interface to Git inside GNU Emacs. There

are many ways in which you can install Magit. To install it from the Melpa repository, add the following to your *~/.emacs*:

```
(require 'package)
(add-to-list 'package-archives
  '("melpa" . "http://melpa.org/packages/") t)
```

When you do *M-x list-packages*, you will see 'magit' in the list. You can press 'i' to mark Magit for installation, followed by 'x' to actually install it. This will install Magit in *~/.emacs.d/elpa*. The version installed on my system is magit-20160303.502.

When you open any file inside GNU Emacs that is version controlled using Git, you can start the Magit interface using *M-x magit-status*. I have bound this key to the *C-x g* shortcut in *~/.emacs* using the following:

```
(global-set-key (kbd "C-x g") 'magit-status)
```

The default Magit screenshot for the GNU Emacs project README file is shown in Figure 2.

Pressing 'l' followed by 'l' will produce the history log in
